

## Intelligent Device Control.

*- Providing you with information that matters*

## Information that matters

Viewserve Anywhere enables smart services, smart products and smart operations by gathering, processing and presenting information from multiple hard- and/or software sources. It does not matter whether you are working with a specific hardware or on multiple platforms, Viewserve Anywhere lets you aggregate and process the information and present it in a common interface.

Viewserve Anywhere is a completely web based service to gather, process and analyse information collected from remote devices. Since Viewserve is web based, no software installation is needed and collected information is easily accessed from any computer.

## One point of entry

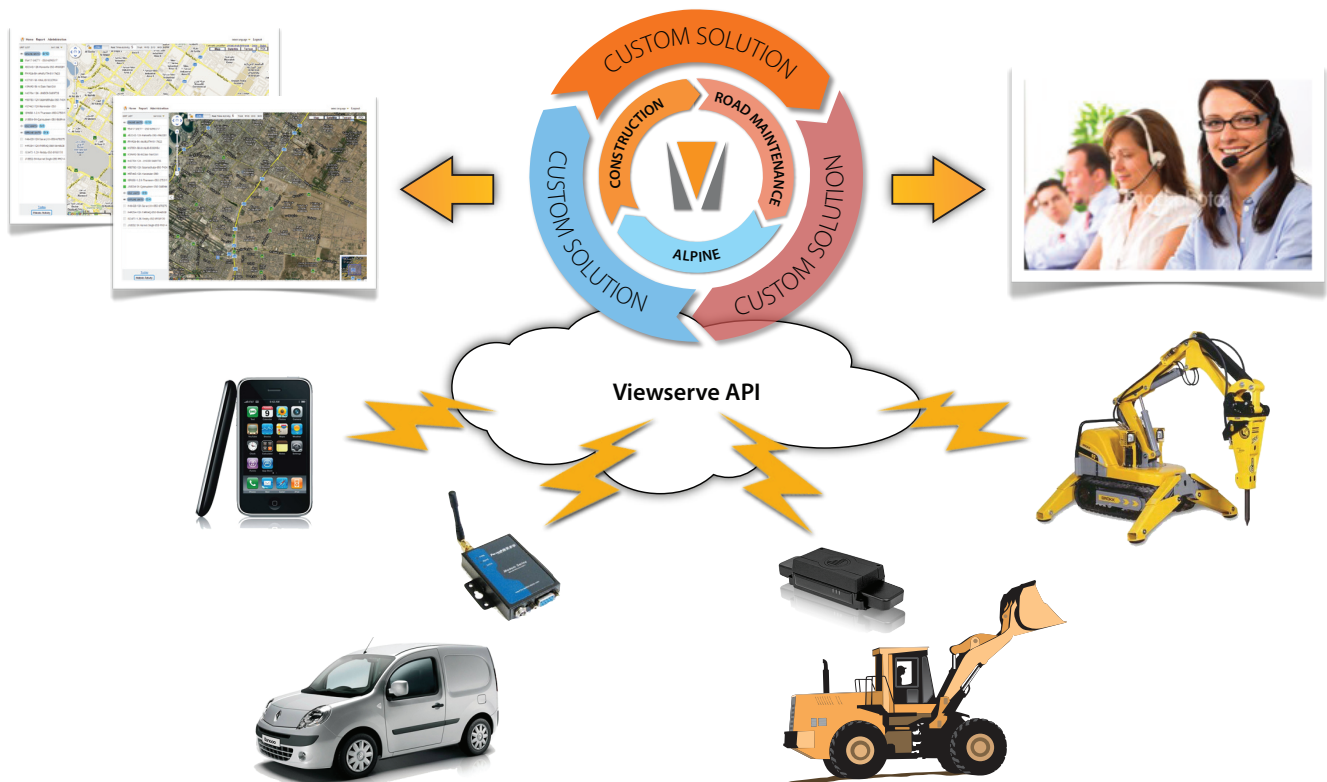

Viewserve Anywhere provides a complete communication platform with API for both in- and output of data. The platform is GPS and modem hardware independent, which creates endless possibilities for you to extract and process information from multiple sources. Viewserve gives you one point of entry to access all your information.

## How does it work?

No matter whether you have an existing installation or need a full end-to-end solution. Viewserve provides the tools to connect mobile devices, light- and heavy machinery and view and analyse processed data in our web-based interface or other systems with access to the information processed within Viewserve.

### Quick facts

- Data aggregator and processing abilities with web interface for remote data access.
- API communication for both in- and output of data.
- GPS and modem hardware independent.
